

# DevOps with Kubernetes and Helm

Jessica Deen  
Cloud Developer Advocate

# HELLO!

## I am Jessica Deen

I am here because I love technology and community.

I focus heavily on Linux, OSS, DevOps and Containers.

I love Disney and CrossFit/Fitness.

You can find me at @jldeen on GitHub, Twitter, and Instagram.

# Disclaimer

The next 60 minutes will NOT make you an expert, but it will:

- Get you thinking
- Show you what's possible
- Give you some sample code for you to get started on your own time

## GOING DIGITAL

**1 million/hour**  
new devices  
coming online  
by 2020

**12 years**  
average age of S&P  
500 corporations  
by 2020

**60% computing**  
in the public cloud  
by 2025

# What we hear from developers

I need to create applications  
at a competitive rate without  
worrying about IT

New applications run smoothly  
on my machine but malfunction  
on traditional IT servers

My productivity and application  
innovation become suspended  
when I have to wait on IT

# What we hear from IT

I need to manage servers  
and maintain compliance  
with little disruption

I'm unsure of how to integrate  
unfamiliar applications, and I  
require help from developers

I'm unable to focus on both  
server protection and  
application compliance

# IT stress points

Security  
threats

Datacenter  
efficiency

Supporting  
innovation

# Cloud is a new way to think about a datacenter

## Traditional model

Dedicated infrastructure for each application  
Purpose-built hardware  
Distinct infrastructure and operations teams  
Customized processes and configurations

Servers

## Cloud model

Loosely coupled apps and micro-services  
Industry-standard hardware  
Service-focused DevOps teams  
Standardized processes and configurations

Services

# DevOps: The Three Stage Conversation

A Venn diagram consisting of three overlapping circles arranged horizontally. The left circle is labeled 'People', the middle circle is labeled 'Process', and the right circle is labeled 'Products'. The circles overlap in pairs and in the center, representing the intersection of these three elements.

**People**

**Process**

**Products**

***DevOps is the union of people,  
process, and products to enable  
continuous delivery of value to  
our end users.***

***-Donovan Brown***

# Key DevOps Practices

<b>Infrastructure as Code</b>	<b>Continuous Integration</b>	<b>Continuous Deployment</b>
<b>Automated Testing</b>	<b>Release Management</b>	<b>Performance Monitoring</b>
<b>Availability Monitoring</b>	<b>Load Testing &amp; Auto Scale</b>	<b>Automated Recovery (Rollback &amp; Roll Forward)</b>

# DevOps Benefits

## IT Performance Metrics

	2015	2016	2017
Deployment Frequency	30x more frequent	200x more frequent	46x more frequent
Lead Time for Changes	200x faster	2,555x faster	440x faster
Mean Time to Recover (MTTR)	168x faster	24x faster	96x faster
Change Failure Rate		3x lower (1/3 as likely)	5x lower (1/5 as likely)

# Why Containers?

## Developers

- Enable 'write-once, run-anywhere' apps
- Enables microservice architectures
- Great for dev/test of apps and services
- Production realism
- Growing Developer Community

## Operations

- Portability, Portability, Portability
- Standardized development, QA, and prod environments
- Abstract differences in OS distributions and underlying infrastructure
- Higher compute density
- Easily scale-up and scale-down in response to changing business needs

## DevOps

# What is a Container?

**Not a real thing.** An application delivery mechanism with **process isolation** based on several **Linux kernel** features.

## Namespaces (what a process can see)

- ❖ PID
- ❖ Mount
- ❖ Network
- ❖ UTS
- ❖ IPC
- ❖ User
- ❖ Cgroup

## Cgroups (what a process can use)

- ❖ Memory
- ❖ CPU
- ❖ Blkio
- ❖ Cpuacct
- ❖ Cpuset
- ❖ Devices
- ❖ Net\_prio

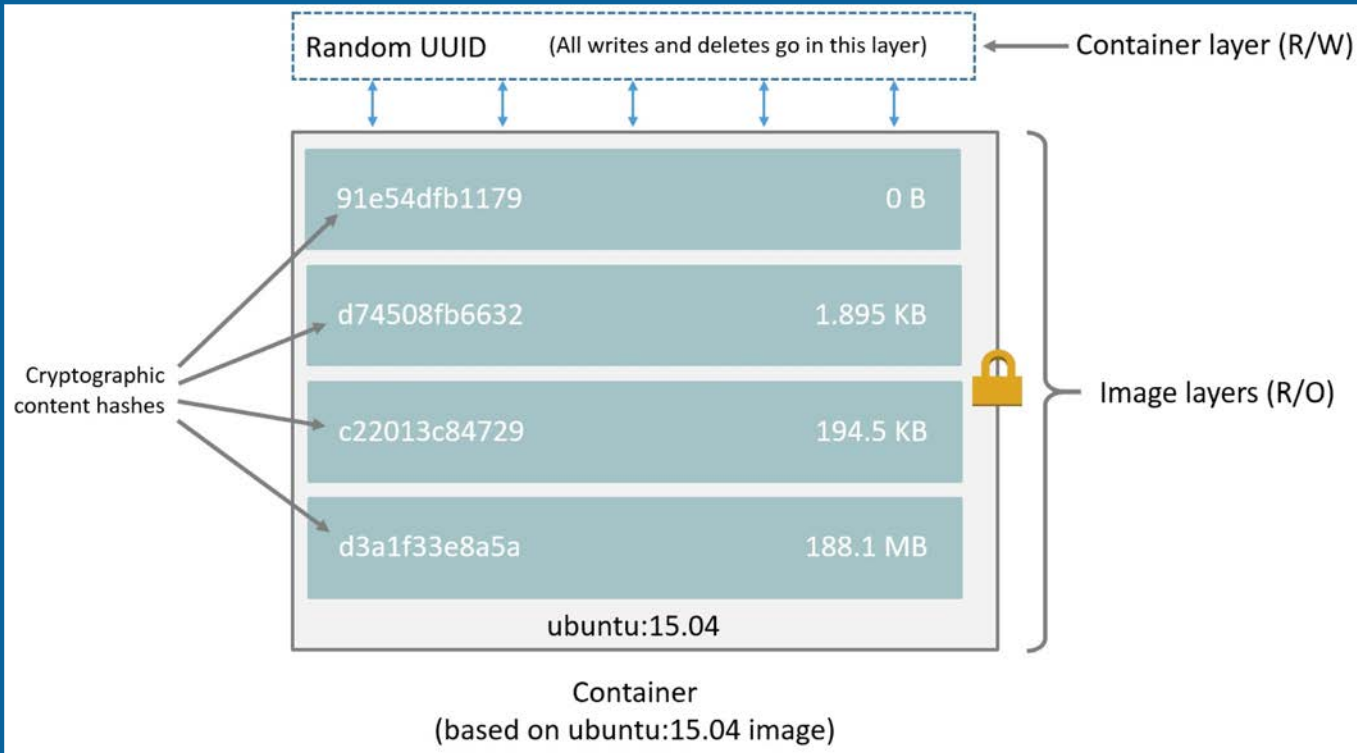

# What is

# docker

- ❖ **Open Source Container Runtime**
- ❖ **Mac, Linux, Windows Support**
- ❖ **Command Line Tool**
- ❖ **"Dockerfile" format**
- ❖ **The Docker image format with layered filesystem**

# Docker Layered Filesystem

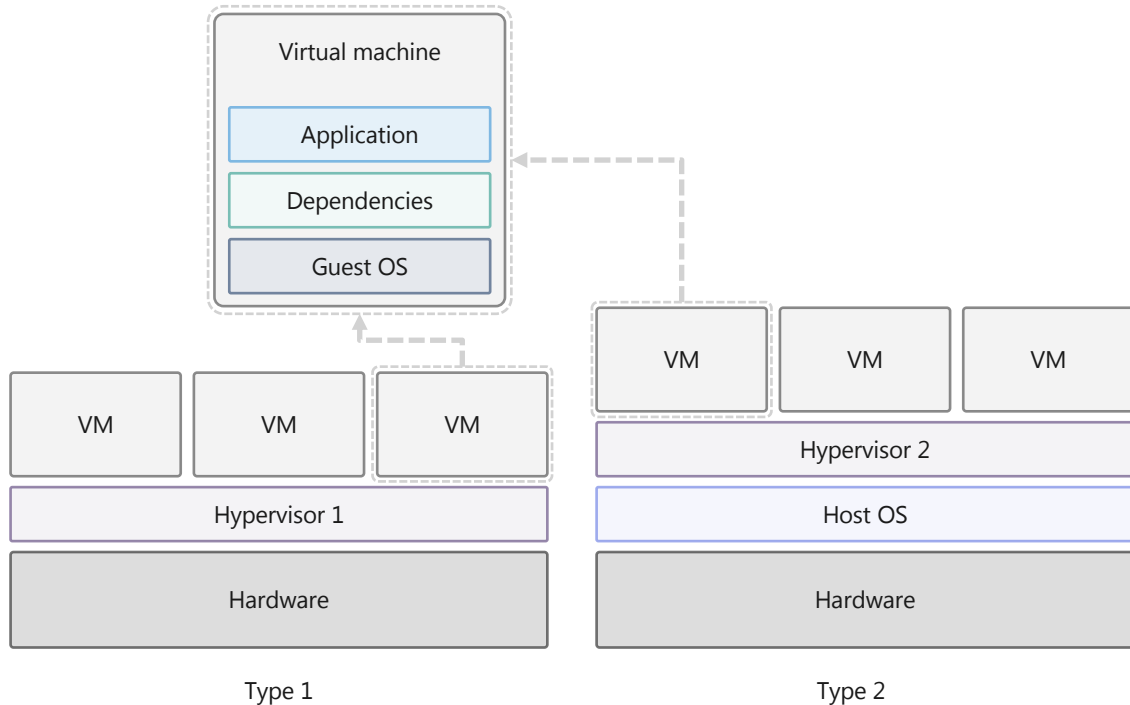

# Docker Layered Filesystem

Kubernetes Repository

JFrog Artifactory

JFrog Xray

The background is a solid dark blue. It features several abstract, 3D geometric shapes in various colors (green, cyan, blue, orange, pink, red) that appear to be floating or layered, creating a sense of depth and modern design. These shapes are primarily located on the left and right sides of the frame, framing the central text.

# **Container Orchestration: Kubernetes**

# What is Kubernetes?

Open source container orchestrator that automates deployment, scaling, and management of applications.

## Features include:

- ❖ Automatic bin packing
- ❖ Self-healing
- ❖ Horizontal scaling
- ❖ Service discovery
- ❖ Load balancing
- ❖ Automated rollouts and rollbacks
- ❖ Secret and configuration management
- ❖ Designed by Google
  - ❖ Based on their system used to run BILLIONS of containers per week
- ❖ Over 2,300 contributors
- ❖ Graduated from CNCF

The background is a solid dark blue. It features several abstract, 3D geometric shapes in various colors (green, cyan, blue, orange, pink, red) that appear to be floating or layered, creating a sense of depth and modern design. These shapes are primarily located on the left and right sides of the frame, framing the central text.

The background is a solid dark blue. It is decorated with several large, overlapping, 3D-style geometric shapes. On the left side, there are shapes in shades of green, cyan, orange, and pink. On the right side, there are shapes in shades of light blue, cyan, pink, and orange. These shapes are arranged in a way that creates a sense of depth and movement, with some appearing to recede and others to come forward.

# **Azure Kubernetes Service (AKS)**

# **Your Kubernetes Cluster Managed by Azure**

# Why AKS?

## Easy to use:

- ❖ Fastest path to Kubernetes on Azure
- ❖ Up and running with 3 simple commands
- ❖ I argue there are 2.5 commands

## Easy to manage:

- ❖ Automated upgrades and patching
- ❖ Easily scale the cluster up and down
- ❖ Self-healing control plane

**Uses open APIs – 100% upstream Kubernetes**

# Getting Started with AKS

```
$ az aks create -g myResourceGroup -n myCluster --generate-ssh-keys  
\ Running ..
```

```
$ az aks install-cli  
Downloading client to /usr/local/bin/kubectl ..
```

```
$ az aks get-credentials -g myResourceGroup -n myCluster  
Merged "myCluster" as current context ..
```

```
$ kubectl get nodes
```

NAME	STATUS	AGE	VERSION
aks-mycluster-36851231-0	Ready	4m	v1.8.1
aks-mycluster-36851231-1	Ready	4m	v1.8.1
aks-mycluster-36851231-2	Ready	4m	v1.8.1

# Managing an AKS Cluster

```
$ az aks list -o table
```

Name	Location	ResourceGroup	KubernetesRelease	ProvisioningState
myCluster	westus2	myResourceGroup	1.7.7	Succeeded

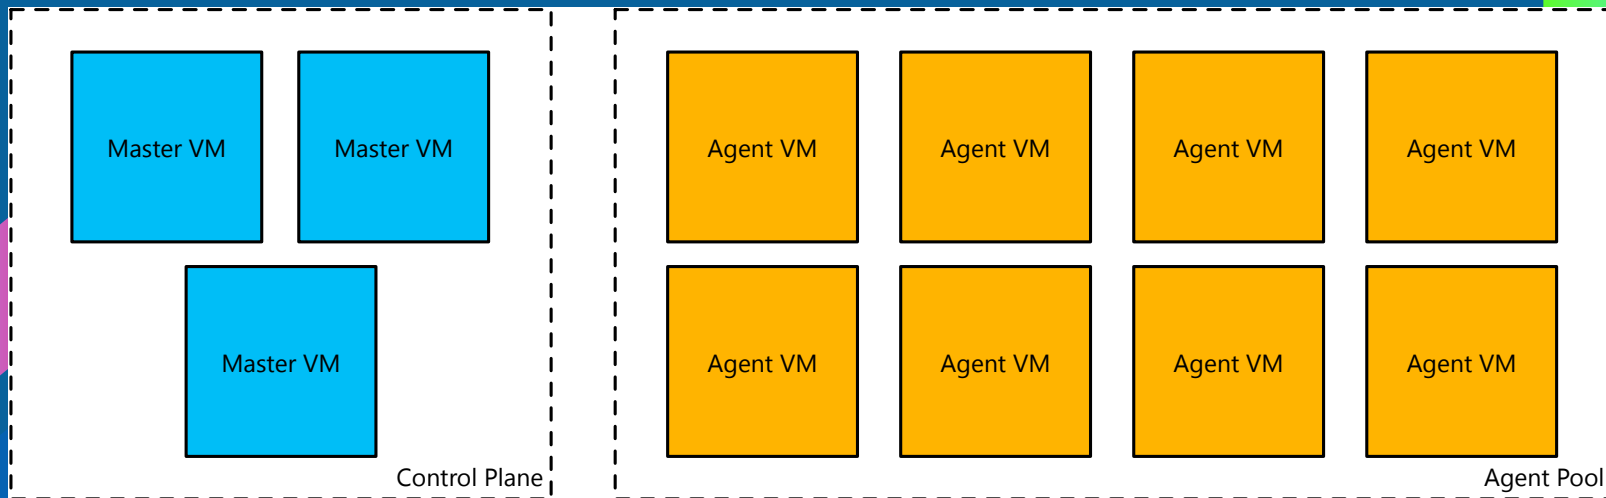

```
$ az aks upgrade -g myResourceGroup -n myCluster --kubernetes-version 1.8.1  
\ Running ..
```

```
$ kubectl get nodes
```

NAME	STATUS	AGE	VERSION
aks-mycluster-36851231-0	Ready	12m	v1.8.1
aks-mycluster-36851231-1	Ready	8m	v1.8.1
aks-mycluster-36851231-2	Ready	3m	v1.8.1

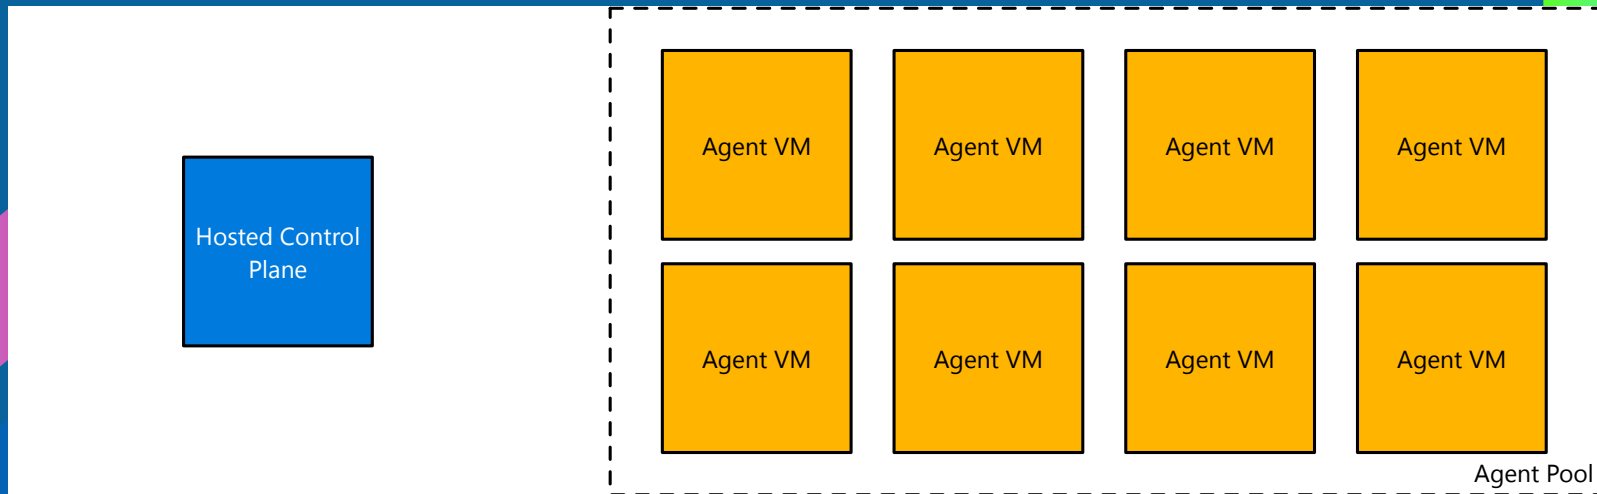

```
$ az aks scale -g myResourceGroup -n myCluster --agent-count 10  
\ Running ..
```

# Helm

The best way to find, share, and use software  
built for Kubernetes

## Manage complexity

Charts can describe  
complex apps; provide  
repeatable app installs, and  
serve as a single point of  
authority

## Easy updates

Take the pain out  
of updates with in-  
place upgrades and  
custom hooks

## Simple sharing

Charts are easy to  
version, share, and host  
on public or private  
servers

## Rollbacks

Use `helm rollback`  
to roll back to an older  
version of a release  
with ease

# Draft

Simple app development and deployment – into  
any Kubernetes cluster

## Simplified development

Using two simple commands, developers  
can now begin hacking on container-based  
applications without requiring Docker or  
even installing Kubernetes themselves

## Language support

Draft detects which language your app is  
written in, and then uses packs to  
generate a Dockerfile and Helm Chart  
with the best practices for that language

The background is a solid dark blue. It features abstract geometric shapes in the corners. On the left, there are overlapping shapes in shades of green, cyan, orange, and pink. On the right, there are overlapping shapes in shades of cyan, green, pink, and orange. The word "Demo" is centered in the middle of the image in a white, bold, sans-serif font.

**Demo**

# 5 Kubernetes Best Practices

- ❖ Build small containers
- ❖ Application architecture
  - ❖ Use Namespaces
  - ❖ Use helm charts
  - ❖ RBAC
- ❖ Implement Health checks
- ❖ Set requests and limits
- ❖ Be mindful of your services
  - ❖ Map external services
  - ❖ Don't rely on load balancers
